

brass, iron, square, round, horizontal, inclined

Bases are popular for their added ornamentation to a metal railing system. And, they generously hide the holes drilled for the baluster installation. Custom Iron stocks cast bases in both brass and iron. Some balusters with embossed surfaces, such as hammered edges, require bases with a slightly larger insertion hole. Please specify the type of baluster to be used with the bases you are ordering.

Below are the part numbers and specifications for each of our bases. For set screw part numbers, just add a -S to the part number you see.
