SPIRAL STAIR MAINTENANCE

Your quality spiral stair from Custom Iron should require very little maintenance. Our stairs can be maintained and cleaned similarly to your household appliances or furniture.

- Avoid harsh cleaners and abrasive materials when cleaning powder coated metal or wood products.
- Powder coated metal: Use mild household dusting or cleaning products.
- Use touch-up paint to cover any scratches that occur on the coated metal.
- Wood: Use standard wood polish/cleaning products.
- Metal accents like brass or copper: Use appropriate polishing products, taking care to protect the surrounding coated steel or aluminum.

Finishes other than powder coated metal might require special handling.
Contact Custom Iron if you have questions.
