

CI "Knocked-Down" Spirals -vs- typical **KIT** spirals

Searching for the right spiral stair can be difficult. There are so many choices you'll come across from super cheap to crazy expensive, right? So how do you decide what's right for you? We want to be sure you realize what other spiral stair companies are often quoting for you in comparison:

Many other companies push a low price spiral by simply selling you a KIT—they just pull parts off a shelf, box them up, and ship them to you for cheap-- but you need to realize that "cheap" also means you may likely have to sift through almost 20 pages of instructions, cut parts to the right length yourself, drill holes where needed yourself, and even try to form the handrail yourself. All of this to end up with a stair that looks... well, like it was a kit! But you should ask yourself: Will it even look good after you go through all of that? Will it feel like it sways from side to side when you walk on it? Is the handrail even made of metal? How much is your time and frustration worth? Worst of all, will you be stuck settling with a stair that you don't like?

That's why we don't sell kits!!

Instead, we build beautiful spiral stairs 1 at a time to fit your project. After assembly, each stair is just Knocked-Down (dis-assembled) into smaller components which are easy for you to handle.

Here are just some examples of the differences you need to be aware of before you buy:

	Our Spirals	KIT spirals
INCLUDED IN BASE PRICE		
Center column sleeves that are custom cut and don't require measuring, adjusting, or set screws	YES	No
Platform	YES	No
